SUMMARY

B.Tech Computer Science Engineering student at JK Lakshmipat University, passionate about Full-Stack Web Development. Experienced in building robust, scalable applications using the MERN stack (MongoDB, Express.js, React, Node.js). Strong foundation in Python, C, C++, SQL, and Data Structures & Algorithms. Dedicated to creating seamless user experiences and efficient backend architectures.

EDUCATION

JK Lakshmipat University <i>B.Tech in Computer Science Engineering (Cybersecurity)</i>	Jaipur, Rajasthan 2023 – 2027
--	----------------------------------

EXPERIENCE

IoT Intern <i>Jawaharlal Nehru University (JNU)</i>	May 2025 – July 2025 <i>Delhi, India</i>
- Designed and developed IoT-based automation projects, including smart water supply and soil absorption systems. - Implemented device integration and real-time monitoring solutions using Arduino, sensors, and cloud platforms to optimize system efficiency. - Processed and analyzed IoT data to enhance automation performance and reliability, collaborating with faculty mentors to ensure goals were achieved.	

PROJECTS

JKLU Mess Management Portal <i>React.js, Node.js, Express, MongoDB, Tailwind CSS, Razorpay</i>	May 2026
- Engineered a full-stack MERN web application digitizing the cafeteria entry system for students, replacing physical ID cards with secure, dynamic QR codes. - Integrated Microsoft Azure AD for SSO with domain-restriction and built Role-Based Access Control (RBAC) across 5 user roles. - Implemented a robust Razorpay payment gateway with HMAC-SHA256 signature verification for dynamic non-veg meal bookings. - Designed an interactive frontend with Tailwind CSS featuring animated blur-modals, real-time QR scanning, dietary filters, and a Reddit-style polling system for student feedback.	
Spam Email Detection System <i>Python, Scikit-learn, NLP</i>	2025
- Developed a machine learning model to classify emails as spam or legitimate with high accuracy. - Applied Natural Language Processing (NLP) techniques for text preprocessing and feature extraction (TF-IDF). - Implemented classification algorithms including Naïve Bayes and Logistic Regression, achieving reliable spam detection metrics.	
SDG-7 Clean Energy Data Analysis <i>Python, Pandas, NumPy, Matplotlib, Seaborn</i>	2024
- Analyzed global electricity access and renewable energy adoption trends using statistical and regression techniques. - Evaluated renewable energy consumption trends (1990–2021) and performed hypothesis testing to assess regional energy efficiency improvements.	

TECHNICAL SKILLS

Web Technologies: React.js, Node.js, Express.js, MongoDB (MERN), HTML/CSS, JavaScript, Tailwind CSS
Programming Languages: Python, C, C++, SQL
CS Fundamentals: Data Structures and Algorithms (DSA), Object-Oriented Programming, Computer Networks
Tools & Platforms: Git, GitHub, Visual Studio Code, Postman, Figma, Linux (Ubuntu, Kali), Wireshark
Data & ML: Scikit-learn, NLP, Pandas, NumPy, Tableau, Data Science
